┌─────────────────┐
│ PROGRAM INFO   │
└─────────────────┘

Program Name   : Advanced Installer Architect

Program Website   : http://www.advancedinstaller.com/

Version   : 12.4.1

Limitations   : None if Patch is Applied

OS   : Vista.SP2/7/8/10 (See Requirments Below for more info)

┌─────────────────┐
│ DESCRIPTION   │
└─────────────────┘

Advanced Installer
Top 10 Architect Features

Repackage existing applications

Repackager

Painlessly capture, customize and repackage existing installations
into MSI packages. Upgrade legacy setups to Windows Installer technology.
Application VirtualizationApp-V
Full support for Microsoft's Application Virtualization technology.
Effortlessly build App-V packages for your software, enjoying all
virtualization benefits.

Support controlling VMware instances from RepackagerControl VMware

instances from Repackager

Choose between performing captures either on development machines or

on VMware virtual machines.

App-V 5.0/5.1 EditorMicrosoft App-V Editor

Open existing App-V 5.0 and 5.1 packages with Advanced Installer,
edit and save the changes from a friendly GUI.
Support controlling Hyper-V instances from RepackagerControl Hyper-V
instances from Repackager
Choose between performing captures either on development machines or
on Hyper-V virtual machines.

Microsoft App-V Packages importMicrosoft App-V Import

Create installation packages by importing existing App-V packages.
The transition has never been so easy.

ThinApp VMware ThinApp.

Full support for VMware's ThinApp technology. Easily create a
virtualized version of your application from your installer.

ThinApp ImportThinApp Import

New project type to help you create installation packages from existing
ThinApp project folders.

Direct Editor (with GUI) for existing MSIsMSI Quick-Edit

Create transforms or quickly edit existing MSI packages directly from
the Advanced Installer GUI.

Support for deploying setup packages to SCCMSCCM deployment support

Connect remotely to your SCCM server and deploy packages without
leaving Advanced Installer's GUI.

REQUIREMENTS

Hardware

The system requirements for running Advanced Installer are:

Minimum Recommended

Core 2 class CPU
1 GB RAM
1024x768 screen resolution
2 GB hard drive space
i5 class CPU
4 GB RAM
1920x1200 screen resolution
10 GB hard drive space

Software
The following software must be installed on your system in order
for Advanced Installer to run correctly:

Windows Vista SP2/7/8/10

Latest Windows Platform SDK

(optional, required only to build certain types of packages)

Generated Install Packages

The MSI or EXE install files that Advanced Installer produces

run on the following operating systems:

Windows XP SP3/Vista/7/8/10

Windows 2008/2012 Server

To create installers that run on Windows 95/98/ME/NT4/2000
please download and use Advanced Installer 10.3.

To build installers on a development machine running Windows XP SP3

please download and use Advanced Installer 12.0. Support for XP SP3
is no longer available for newer versions of Advanced Installer.

Install packages use the Windows Installer 2.0 (or higher)

installation engine. The engine ships with the latest

Microsoft operating systems, service packs, updates and applications.

It can also be included in EXE packages as a prerequisite.

Advanced Installer for Java has the ability to create install bundles
to install Java programs on the following versions of Mac OS:

Mac OS X 10.x PowerPC

Mac OS X 10.x Intel

Windows 10/8/7 compatibility

Both Advanced Installer and the EXE/MSI install packages it creates
are tested and run on Windows 10, Windows 8.1, Windows 8 and Windows 7.

The Microsoft Windows 10, Windows 8.1, Windows 8 and Windows 7
operating systems are fully, officially supported by the
latest Advanced Installer release

```
  INSTALL INFO
```

Install using the advinst.msi file in the Setup Folder

Follow onscreen instructions

Do not Run it When Complete

```
  ACTIVATION INFO
```

Block the Program with your Firewall to be safe

You can copy
Run advanced.installer.12.4.1.architect.edition[danhuk]-patch.exe

To the Program folder so you dont need to search for the files

or Run from the Patch folder and Search for the files and Select

The Choice is yours

Right Click the Patch and Select Run as Admin

Run adv.installer12.4.1.architect[danhuk]-patch.exe

Proram Folder
(C:\Program Files (x86)\Caphyon\Advanced Installer 12.4.1\bin\x86)

File to Patch
advinst.exe

Patch also updates the License files in the Programdata folder
